

Hands-on tech lead and engineering manager, with 8+ years building financial-grade platforms, data systems, and APIs. Led teams of up to 7 engineers across payments, lending, and e-commerce. Track record includes uncovering EUR400K in legacy discrepancies, reducing incidents by 83%, halving cash-volume loss, and reducing infra cost by 50%. Shipping value with AI agents daily.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, C#/.NET, Go, Scala, Terraform, Shell

Data & Orchestration: Spark, Kafka, KSQL, Airflow, Dagster, DBT, Redshift, BigQuery

Monitoring & Visualization: Superset, Lightdash, PowerBI, Grafana (LGTM), ELK Stack

Cloud & Infrastructure: Azure, Kubernetes (AWS/GCP/Azure), Terraform, GitHub Actions, BuildKite, Redis, SQS, SES, CloudFront

App Development: React Native, VueJS, Svelte

EXPERIENCE

ONRAMP HEAD OF DATA AND ANALYTICS

April 2025 - Present

- Operating 3-5 parallel AI agents on a daily basis to code, research, document, and perform ad-hoc analysis; compressing weeks into days
- Built a lakehouse platform on Azure that replaced fragmented legacy reporting with automated, auditable, reconciled pipelines across millions in monthly volume in fiat and L2 transactions. Architecture is LLM-optimized from day 1 with everything stored in code.
- Automated bi-monthly statement generation and reconciliation, replacing a manual process that previously took 2-3 days per cycle
- Reduced infrastructure cost 50% by replacing under-optimized legacy jobs
- Standardized the reconciliation process and closed financial periods across the organization, establishing repeatable audit workflows

HONEST LEAD DATA PLATFORM ENGINEER (L3)

June 2023 - April 2025

- Built self-service data mesh that unified siloed data across teams into a single cataloged platform
- Reduced monthly production incidents from 60+ to under 10 through pipeline reliability overhaul and runbook standardization
- Halved cash-volume loss with improved credit approval modeling by iterating on the Probability of Default model
- Established data governance practices including data contracts, SLAs, and ownership model
- Standardized feature definition process across engineering, improving cross-team alignment and delivery predictability

OMISE PAYMENT LEAD DATA ENGINEER (TEAM OF 7)

Sep 2021 - June 2023

- Delivered mission-critical clearing/settlement API in 3 weeks against an original 3-month estimate
- Modernized 500+ pipelines processing terabytes of payment data, reducing failures from near-daily to roughly twice per week
- Deployed Superset dashboards and Spark on Kubernetes for delta table processing and CDC ingestion
- Mentored mid-level engineers to senior, building team capability while delivering at scale

CREA SENIOR BACKEND & DATA ENGINEER

Jan 2021 - Sep 2021

- Optimized high-volume e-commerce data sync system, cutting warehouse query time from 2 minutes to 1.5 seconds

Earlier: Senior Data & Software Engineer at Devcurate (2019-21, Bangkok) - built multiple products E2E • Software Engineer at Leastra (2018-19, remote) • Algorithms Intern at Valeo (2017, Cairo - reduced sensor tracking bottleneck by 88%) • AI & Robotics R&D at Alpha Inference (2020, Geneva)

Side projects: Shipping one indie product per month since Jan 2026 across mobile, web, and AI tooling

EDUCATION

ALEXANDRIA UNIVERSITY BS IN COMPUTER & COMMUNICATION ENGINEERING

2013 - 2018 | Major GPA: 3.92 / 4.0

UDACITY MACHINE LEARNING NANODEGREE

2018 | 6 months
